

FOOTPATH PLANTER TYPE A:

DESCRIPTION: Palm planting pits on paved footpaths where the overhead awning is less than 2 metres from the outside face of the kerb.

DIMENSIONS: Internal dimensions of planting pit: 815x815mm.

MATERIALS: Footpath planters shall use pavers for the header course which match surrounding paving type, as required by the Chief Executive Officer.

CONSTRUCTION: The planter shall be constructed as shown in the detail opposite, and specified in the CCC Development Manual. Special attention should be given to the concrete footing beneath the header course, which should finish flush with the inside edge of pavers.

PLANTING: Species to be nominated by Cairns City Council. Minimum pot size shall be 45 litres. When planting, the existing soil line within the container should finish at a level 100mm below the adjacent paving level.

REQUIREMENTS: Standard footpath planters shall be located at 6 metre centres along the length of the footpath. Where other structures or street furniture are located so as to obstruct the siting of a footpath planter at the required location, the structure or street furniture where possible, shall be relocated clear of the site of the footpath planter.

IRRIGATION: If more than one planter is to be installed, they should be linked with a 25mm P.V.C. conduit laid within the planter as close to the kerb as possible for future irrigation works.
